

Optional Wheel Kit Installation Instructions for Landscape Rake (PILSRWA)

STOP!

Read your Tractor Operator's Manual and the safety messages on this implement!

Our Quick Attach allows the operator to quickly and easily adjust variable mounting points for each implement for both Cat 1 and 2 tractors.

Instructions for Mounting Wheel Kit to Landscape Rake:

With implement mounted, park tractor on level ground. Raise Rake a few inches so weight is not resting on tines.

Step 1: Remove two (2) outermost bolts and nuts that hold two outside tines to main support, and remove the one (1) outside tine. (See Fig. 1)

Step 2: Insert wheel bracket under main support and back to align with bolt holes. Reinsert bolt through inner hole, tine and then through wheel bracket. Only finger tighten at this time. NOTE: Bracket goes below tines. (See Fig. 2)

Step 3: Reinsert outside tine from where it was removed. Reinsert bolt through outer hole, tine and then through wheel bracket. Finger tighten. Place connecting bracket over tines and assemble with bolts and nuts. (See Fig. 3)

Step 4: Tighten all bolts and nuts. Repeat assembly procedure for other side.

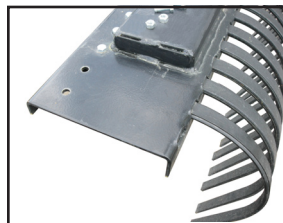

Figure 1 - Remove two (2) outer bolts holding tines.

Figure 3 - Reinsert tine and bolt bracket

Instructions for Adjusting Wheel Height:

As with the wheel spindles on Priefert Finishing Mowers, the wheels for the Landscape Rake have spacers which can be configured to raise or lower the wheel in 1/2" and 1" increments.

To adjust the Rake height the spacers must be suitably placed above and below the bracket bushings. (See Fig. 4)

Spacers are retained by a locking clevis pin. Squeezing both sides of this pin unlocks the pin allowing removal. (See Fig. 5)

Achieving the professional look is accomplished by combining the spacers above or below the bracket bushings for both wheels.

After adjustments are made, reinsert pin, making sure it locks as before.
